

DBMS

LAB Assignment-2

1. Create a table **EMP1** with following structure.

ID	Name	Basic	Designation	Age
----	------	-------	-------------	-----

Column Description:-

ID	Number (2)
Name	Varchar2 (10)
Basic	Number (6, 2)
Designation	Varchar2 (10)
Age	Number (2)

2. Change the data type of the field Basic from float to integer with required size of the **EMP1** table.
3. Change the field size of Name column of the **EMP1** table from 10 to 15.
4. Create another table **EMP_trainee** with the same (changed) structure. The column ID to be renamed as Emp_id in the EMP_trainee table.
5. Insert following data in **EMP1** table:-
(1, Rohit, 6700, Manager, 24)
(2, Sunil, 6200, Engineer, 27)
(3, Payal, 6300, Engineer, 25)
(4, Kunal, 6700, Trainee, 28)
(5, Sunita, 6230, Trainee, 26)
(6, Bimal, 7000, Trainee, 25)
6. Insert all rows with the designation 'trainee' from the **EMP1** table to **EMP_trainee** table.
7. Add columns Skills (data type-varchar2 and size-10) and DOJ(data type-date) to the **EMP1** table and add data for the Skills and DOJ columns according to your own wish.
8. Update more than one row in one query in EMP1 table.
9. Rename the column Age of **EMP1** table to Age_in_Years.
10. Drop the Age column from the **EMP_trainee** table.
11. Rename the table **EMP** to **EMP_Mgr_Engr**.
12. Truncate **EMP_Mgr_Engr** table.
